

A I T R A N S F O R M A T I O N

Streetwear E-Commerce

Germany & Europe

Prepared for Carlos & Javi · June 2026

Private & Confidential

4 AI Modules

EU Compliant

< 8 Weeks to first value

You're losing ground — here's why

C&A and Springfield are gaining share. The gap is fixable.

Cold experience

No styling guidance online. Customers leave without buying.

Low order value

Single purchases. Limited cross-sell. AOV not growing.

Manual operations

Catalog copy, inventory, segmentation — all done by hand.

Slow to market

Product launches delayed by content bottlenecks.

Why AI — not just more custom code?

Custom code only

- ✓ Rules need a developer every time behaviour changes
- ✓ Can't build a natural language styling assistant
- ✓ Templates produce the generic copy Carlos wants to avoid
- ✓ Does not improve over time — static logic

AI solution

- ✓ Learns from every session — improves automatically
- ✓ Styling assistant only possible with an LLM
- ✓ Brand-voice copy, not templates
- ✓ Gets smarter without extra engineering

The team still owns the infrastructure. AI handles what AI does better.

Four modules — one connected experience

Recommendation engine — how it works

Personalised from session one — no purchase history required

AI styling assistant

Replicate the in-store sales assistant — online, always on

Styling assistant

What goes with the Koln hoodie?

Keep it oversized on top — slim or straight-leg jeans work best. The Dortmund cargo in olive is the closest match to that colourway right now.

Dortmund Cargo — Olive

Essen Slim — Black

Add both to cart →

Brand voice locked in

System prompt enforces tone
— Carlos controls it

Only real products

RAG pulls live catalog —
no hallucinated items

LangSmith monitored

Every response scored
for tone + accuracy

Catalog automation — how it works

From product data to published copy — automated, brand-safe, human-approved

70% reduction in content creation time — brand voice enforced at prompt level

Virtual try-on

The strongest competitive differentiator — customers see the product on themselves before buying

HOW IT WORKS

1 Customer uploads a photo

Full-body or portrait. Processed session-only, never stored.

2 Pose estimation + garment overlay

AI model drapes selected garment to body shape and pose.

3 Personalised visualisation delivered

Customer sees the garment on themselves. Shown in-session, not stored.

–20–30% return rate

Customers set accurate size expectations before purchase

Highest differentiation

C&A and Springfield cannot match this without major investment

Drives retention & word-of-mouth

Memorable experience customers share — organic growth channel

Phase 3 scope: Build-vs-buy evaluation (Snap AR, Zeekit, custom model) · EU AI Act biometric risk assessment required · POC with one category before full rollout

Three phases — value from week one

Phases 1 and 2 overlap — catalog automation pays for the next phase.

What does it cost?

Indicative ranges — refined once Javi confirms infrastructure specs and traffic volumes

Recommendation engine

Zero LLM API cost. Margin boost built in.

€15k–25k

build

€200–600 / mo

running

AI styling assistant

Variable LLM tokens. Cap at 5 turns/session.

€10k–18k

build

€300–1,200 / mo

running

Catalog automation

Replaces manual copywriting. Pays back in 4–6 wks.

€6k–10k

build

€50–200 / mo

running

n8n (optional)

Add later if visual workflow management needed.

€1k–3k

build

€0 (self-hosted)

running

Phase 1+2 total build: €31k–53k

Monthly running: €550–1,900

Catalog automation payback: 4–6 weeks

Built to be compliant — and always on

EU compliance

EU AI Act

Limited risk — transparency disclosure only

GDPR

All data stays in Frankfurt. Deletion pipeline included.

LangSmith

Full audit trail of every AI decision

No high risk

No employment, credit, or biometric decisions in Ph. 1–2

Zero blast radius

AI never blocks checkout

Deployed independently — storefront always works

Circuit breakers

3 LLM failures → instant fallback, no waiting

Graceful degradation

Rec engine down → bestsellers. Chat down → hidden.

99.9% storefront target

AI services have separate health checks & SLAs

Ready to start.

Five actions to move from proposal to first delivery

1

Align on Phase 1 scope

Confirm catalog automation as the starting point

2

Consent banner audit

Confirm legal basis for behavioural data — GDPR

3

Python pipeline POC

2-week POC on a subset of the catalog

4

Stand up LangSmith

Monitoring environment live alongside POC

5

Phase 2 scoping session

Once POC results are in hand
